

Challennges Faced during project:
CSE299.12
Group:06

Kazi Abdullah Al Hasnaine (2211688 642)
Md. Asaduzzaman Sunny (2211702 642)
Al Amin (2212251 042)
Md. Jalal Abedin Pial (2211158 642)

1. Had a small idea about Python. Was confused about how machine learning models work.
2. Classifiers that we used to detect eyes was not working properly and we had to drop the idea of eyes being open to get attendance.
3. Laptops that we were using was struggling to keep up with the pressure that we were putting on them.
4. Online resources to learn was scattered.
5. Confusion about data type to store face_encodings data into database.
6. Fetching BLOB files directly into the system was causing corrupted files and we had to solve it using Pickle.
7. We had never worked with python along with database systems, we were not sure how to pass data from python script to database and fetch into python script.
8. We are still struggling with redundant data. Storing attendance into MySQL database causes redundant data cause MySQL doesn't support multiple data in a single field.
